## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-25 and 27, drawn to methods for differentiating systemic inflammatory non-infections conditions and systemic inflammatory infections conditions.

Group 2, claim(s) 26 and 28, drawn to methods for assay calibration, and screening of therapeutics.

Group 3, claim(s) 29, drawn to method of analysis of gene activities modulated by particular gene.

Group 4, claim(s) 30, drawn to methods of gene analysis related to sepsis or SIRS by electronic processing.

Group 5, claim(s) 31, drawn to software production methods.

Group 6, claim(s) 32, drawn to methods to provide experimental systems for modeling cellular signal transmitter pathways.

### **Further Lack of Unity Requirement:**

If Applicants elect the invention of Group 1, 2, 3 or 4, Applicants shall further select a single specific combination of gene sequences from the groups consisting of SEQ ID NO: 1-91, as recited in claim 10. Claims requiring specific gene fragments will be examined in so far as they require the selected combination. Claims requiring only non selected specific gene fragments will be withdrawn from examination as to a non-elected invention.

2. The inventions listed as Groups 1-7 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1634

The common technical feature among the different groups is the differential gene activity associated with sepsis. However, such a feature was known in the prior art and is taught by Chinnaiyan et al (2001) (as cited on the IDS of 11/09/2006. As such the common technical feature is not a special technical feature in view of the prior art.

With regard to the further lack of unity related to the different sequences recited in claim 10, the different sequences, and combinations and subcombinations thereof, are different because each sequence is composed of a unique, structurally distinct nucleotide sequence, where the sequences as identified by SEQ ID NO: 1-91 are not common to one another.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
